

RDA DMP Common Standard

This is a minimum set of universal terms that we agree on which ensure basic interoperability of systems using maDMPS. Further fields can be added in specific deployments, but they do not guarantee interoperability. DMP tools can use any other fields in their internal data models.

Cardinalities: each field in this model can be expected to appear as part of a message exchanged between systems. However, not all of fields or classes are required [0..1] or [0..*].

Full documentation that defines the standard:
<https://github.com/RDA-DMP-Common/RDA-DMP-Common-Standard>
